Senior Software Engineer / Founding Engineer / CTO — May 2022 – Present

widya wicara

TRANSKRIPSI.ID & WIDYA NOTULENSI

Architected, built and launched **Transkripsi.id** and **Widya Notulensi** (https://notulensi.id), two production **AI & LLM powered transcription products**

- Built production **speech-to-text**, **meeting transcription**, and **multi-participant speaker diarization** system with data **encrypted in transit and at rest**, and implemented versioning to preserve meeting-data integrity and provide tamper traceability.
- Shipped **automated meeting-bot integrations** for **Zoom**, **Google Meet**, and **Microsoft Teams**; migrated meeting-bot workloads from **Kubernetes** to **Google Cloud Run Jobs**, reducing bot latency join latency from 1-2 minutes and ultimately **<30 seconds**, while moving compute to an on-demand model that **reduced idle infrastructure costs**.

TECH

Next.js | NestJS | Python | Flask | PyTorch | Wav2Vec | Speaker Embedding | Docker | Google Cloud Run Service | Google Cloud Run Job | Kubernetes

> 1000
AI WORKLOADS PER MONTH

MORE AI PRODUCTS

Architected and shipped additional AI products spanning **conversational AI**, **text-to-speech**, **generative video**, **content automation**, and **media processing**, working with models including Wav2Vec, Whisper, FastSpeech2, Parallel WaveGAN, and ESPnet2.

TEAM

Built and led the engineering team through multiple headcount stages (**peaking at 15**, later restructured to a **core team of 3**), establishing **hiring standards** and a **mentoring track** from junior to senior.

Founding engineer to CTO: AI transcription products serving 100K+ users.
