Summary

Senior Software Engineer - Full-Stack & AI/ML

0-1 Startup Founding Engineer *and 1 to 100K Maintainer.*
Client-facing, *experienced with multiple production AI projects/products.*

Senior Software Engineer and hands-on technology leader with **7+ years** of experience building and shipping **production AI and distributed systems**. Deep experience across **speech AI**, **RAG/NLP**, **computer vision**, **backend systems**, **Kubernetes**, and **cloud infrastructure (AWS/GCP)**, with systems serving **100K+ users**. Combines hands-on engineering with **system architecture**, **technical leadership**, and **client-facing delivery**, owning complex products from design and model development through production deployment and optimization.

7+

YEARS OF EXPERIENCE

100K+

USERS SERVED

Education

Background in Theoretical Physics with Scientific Computing

SKILLS

Maths | Physics | Computing (Python, Fortran)

01 · MSC · 2017 – 2018 · GPA 3.7

Imperial College London

Master of Science, Physics

DISSERTATION

Activation energies of ionic migration in perovskites, via Electrochemical Impedance Spectroscopy

Experimental physics + computation

Impedance measurements on perovskite solar cells, analysed and modelled in Python.

Wrote an EIS fitting algorithm

Fit equivalent-circuit models to impedance data by minimising mean-square error.

Results matched theory

Activation energies agreed with prior studies. Linear regression, Matplotlib visuals.

02 · BSC · 2011 – 2015 · GPA 3.66

Universitas Gadjah Mada

Bachelor of Science, Condensed Matter & Materials Physics

UNDERGRADUATE THESIS

Electronic Transport in Semiconducting Graphene

Theory + computation

Python (NumPy, Matplotlib), Fortran and MATLAB.

Modelled a graphene pn junction

Two differently doped graphene layers, assessed for semiconductor devices.

Lengthy analytical derivations

Worked the maths through by hand, then solved and visualised it numerically.

Physics taught me to model messy data, then write the code that fits it.

London · Yogyakarta

Data Scientist & ML Engineer

Mar 2019 – Dec 2020

at Sorabel, Datanest, Azima

---

01 · SORABEL

SORABEL

Developed **market-basket analysis** and **search/recommendation models** for fashion e-commerce.

STACK

Python | NumPy | SQL (BigQuery)

02 · DATANEST

Datanest

Built **demand-forecasting** and **time-series models** to predict when retail customers were likely to reorder, enabling sales teams to proactively prioritize and time customer outreach.

STACK

scikit-learn | TensorFlow | XGBoost

03 · AZIMA

AZIMA AI

Built an **end-to-end conversational commerce and logistics system** where customers ordered products via **WhatsApp** using text or images; implemented **custom NLU** and **computer vision OCR** for order-to-product mapping and **VRP-based optimization** for automated delivery routing.

STACK

NLU | Computer Vision | Dialogflow | Text fuzzy matching | Search algorithm | Vehicle Routing Problem

From fashion recommendations to WhatsApp orders: ML inside real products.

Data in, decisions out.

Senior Software Engineer / Co-Founder

Dec 2020 – April 2022

INFIDEA

01

Served as a **client-facing technical lead** and **hands-on engineer** for AI/ML projects, translating business requirements into production systems while **mentoring junior engineers**.

02

Owned the **end-to-end ML lifecycle**, from model training and experimentation through API integration, containerization, and production deployment using **Docker** and **Kubernetes**.

03

Delivered production **Text-to-Speech**, **Object Detection**, **OCR**, and **Crowd Counting** systems for a **major telecommunications client**.

04

Built **MillionRobo**, a **real-time algorithmic trading platform** using **WebSocket** and **pub/sub** architecture, and **NextSci**, an **optimization engine** for routing, bin-packing, and scheduling problems.

SOFTWARE ENGINEERING

Python | JavaScript | C/C++

AI AND ML

PyTorch | TensorFlow | Computer Vision | NLP

INFRA

Docker | Kubernetes | CI/CD

Client-facing tech lead, end-to-end ML lifecycle, production AI systems.

Co-Founder, Infidea.id

Fractional CTO

Jan 2025 – June 2026

Widya Robotics & widya SECURITY feel SAFE with us

WIDYA ROBOTICS

Led **technical presales** and **end-to-end delivery** for AI projects across Widya Robotics, serving as the **go-to technical owner** from client discovery and solution architecture through implementation and production deployment; helped close and deliver multiple commercial AI projects.

WIDYA SECURITY

Led **cybersecurity initiatives** at Widya Security, including developing **LLM-powered VAPT reporting platform** that accelerated penetration-testing report generation.

COMMERCIAL AI PROJECTS

Closed and delivered **multiple commercial AI projects**, including:

- Led development of a **RAG based clinical assistant** of Skin Clinic doctors: chatbot recommendation based on internal documents and stock checking for each clinic
- Architected and delivered **real time vehicle counting, classification, License Plate Recognition** system for harbor operations, processing **5,000+** of vehicle detections per day using YOLO, MobileNetV3, PyTorch/TensorRT, FastAPI, RabbitMQ, and Docker. (Widya Robotics)
- Closed and led delivery of a **real-time computer-vision system for fertilizer-bag counting**, processing **thousands of bags per day** in production. (Widya Robotics)

From presales to production: AI delivery across Widya Robotics & Widya Security.

Fractional CTO

Senior Software Engineer / Founding Engineer / CTO — May 2022 – Present

widya wicara

TRANSKRIPSI.ID & WIDYA NOTULENSI

Architected, built and launched **Transkripsi.id** and **Widya Notulensi** (https://notulensi.id), two production **AI & LLM powered transcription products**

- Built production **speech-to-text**, **meeting transcription**, and **multi-participant speaker diarization** system with data **encrypted in transit and at rest**, and implemented versioning to preserve meeting-data integrity and provide tamper traceability.
- Shipped **automated meeting-bot integrations** for **Zoom**, **Google Meet**, and **Microsoft Teams**; migrated meeting-bot workloads from **Kubernetes** to **Google Cloud Run Jobs**, reducing bot latency join latency from 1-2 minutes and ultimately **<30 seconds**, while moving compute to an on-demand model that **reduced idle infrastructure costs**.

TECH

Next.js | NestJS | Python | Flask | PyTorch | Wav2Vec | Speaker Embedding | Docker | Google Cloud Run Service | Google Cloud Run Job | Kubernetes

100K+
USERS, BOTH PRODUCTS

99.9%
UPTIME

> 1000
AI WORKLOADS PER MONTH

MORE AI PRODUCTS

Architected and shipped additional AI products spanning **conversational AI**, **text-to-speech**, **generative video**, **content automation**, and **media processing**, working with models including Wav2Vec, Whisper, FastSpeech2, Parallel WaveGAN, and ESPnet2.

TEAM

Built and led the engineering team through multiple headcount stages (**peaking at 15**, later restructured to a **core team of 3**), establishing **hiring standards** and a **mentoring track** from junior to senior.

Founding engineer to CTO: AI transcription products serving 100K+ users.

Widya Wicara

Transkripsi.id & Widya Notulensi

Two AI transcription products

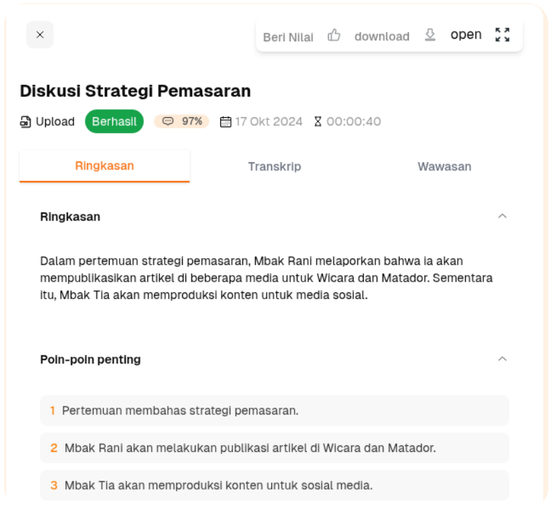

100K+ users

COMBINED

01 · UPLOAD & TRANSCRIBE

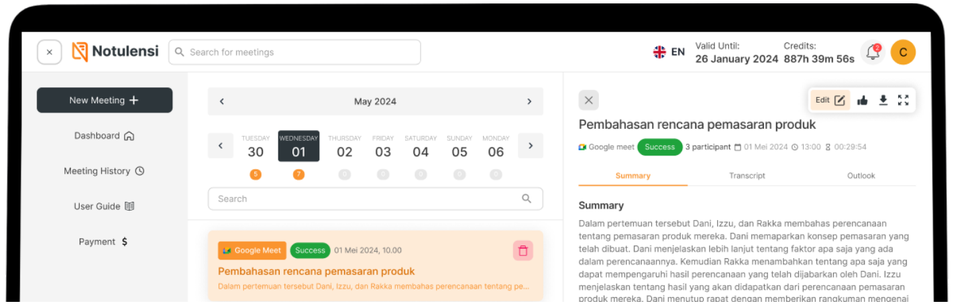

Transkripsi by widya wicara — *transkripsi.id*

02 · MEETING BOTS

Notulensi by widya wicara — *notulensi.id*

JOINS MEETINGS ON

zoom · Google Meet · Microsoft Teams

Transkripsi.id + Widya Notulensi: 100K+ users combined, 99.9% uptime.

Founding engineer / CTO

Indie Developer Projects

2020 – present

01 · 2025 – PRESENT

NoteSpark AI

notespark.id

1,900+
REGISTERED USERS

Built and launched an **AI study companion** using **LLMs**, **Next.js**, **Go**, and **React Native**, reaching **1,900+ registered users** across web, iOS, and Android. Subscribers **mostly from the US**.

02 · 2020 – PRESENT

Medical SaaS

2+ years
IN CONTINUOUS USE

Built and maintained a **production SaaS platform** used continuously by a **medical clinic** for **2+ years**.

NoteSpark AI · Medical SaaS — *Indie developer*

Technical Skills

LANGUAGES	Python, Go, TypeScript/JavaScript, C/C++, R
AI/ML	End-to-end from fine-tuning to production of ML systems including but not limited to Computer Vision, RAG, NLP, Generative AI
ML FRAMEWORKS	PyTorch, LangChain, TensorFlow
BACKEND & APIS	Go/Gin, Flask, FastAPI, Node.js, NestJS, microservices
CLOUD & INFRA	AWS, GCP, Kubernetes, Docker, Cloud Run, AWS Lambda
FRONTEND & MOBILE	React, React Native, Next.js
DATA	SQL, BigQuery, PostgreSQL, Redis
DEVOPS	CI/CD with GitHub Actions, GitLab CI
LEADERSHIP	Technical Leadership, System Architecture, Technical Presales, Mentoring, Hiring, Cross-Functional collaboration

Certifications

01

Certified Appsec Practitioner V2 (CAP)

May 2026

02

ISO/IEC 27001:2022 Lead Implementer

April 2025
